

Energy Policy

Componentes Intel de Costa Rica is committed to achieving energy performance principles and improvements into our operations and products.

We will comply with all applicable legal requirements and Intel Energy requirements, related to the energy use, consumption and efficiency.

We are committed to provide all the information and necessary resources to achieve energy objectives and targets.

Maintain focus on Energy Management System and continually improve our performance by regular auditing of our systems and working towards achieving the Objectives and Targets set down in our Energy Management Programmes .

We are committed to designing and manufacturing products that are safe, energy efficient and minimize impact to the environment

Ensure that operational controls we have in place to manage our environmental and energy systems are safe, effective and robust and by minimisation of energy use, reduce greenhouse gas emissions in line with our Corporate Goals

We will promote purchase of energy-efficient products and services for our operations and designs for energy performance improvements

Overall, we are committed to continually improving our Energy standards, culture and performance, and will transparently report our performance goals and indicators.

We will continue to maintain appropriate controls, including periodic review, to ensure that this policy is being followed.
