

ENERGY POLICY

1. Intel Vietnam is committed to the implementation of the Energy Efficiency Principle, and continually improving our energy standard, culture and efficiency.
2. We will comply with all applicable legal requirements, and maintain Intel's standard of energy requirements.
3. We are committed to establishing an effective and robust energy management system, providing all the required information and resources to achieve energy objectives and targets.
4. We are committed to be transparent in reporting our energy performance goals and indicators, conducting regular reviews and audits to understand our energy performance.
5. We are committed to designing and manufacturing safe and energy-efficient products, which would minimize impact to the environment.
6. We will promote purchase of energy-efficient products, services and designs for energy performance improvement.
7. We will review the policy in a periodic interval and communicate to employees at all levels within the organization.
